SUMMARY

I am a certified full stack developer with a passion for building innovative and impactful applications. My expertise lies in utilizing HTML, CSS, JavaScript, React, Postgresql, Ruby, Rails, and PHP to bring ideas to life. With a certification from Moringa School , I have honed my skills and gained valuable experience in software development. I am always eager to learn and grow, and I thrive when working with a team of diverse individuals from around the world. I believe that collaboration is key to creating amazing products, and I am committed to constantly improving my skills and contributing to the development community.

SKILLS

- **Programming languages:** JavaScript, HTML, CSS, Ruby, PHP, Python.
- **Technologies/ Tools:** VS Code, Git & Github, MySQL, SQLite3, PostgreSQL.
- **Frameworks/ Libraries:** React Js, Bootstrap, Tailwind CSS, Django, and Ruby on rails.

Projects

CMR-Africa (www.cmrafrica.org)
A full-stack web application in Core PHP & JavaScript that hosts both the admin and the front-end, Africa's Premium Platform for Moots, Research, Mentorship, and Legal Aid.

Church Management System (www.umojaiisda.org)
A full-stack web application that hosts both the admin and the other users concurrently. A user can perform actions such as creating profile and make online payments.
The admin can perform full CRUD operations such as creation of users, programs, events, & members, their updates and deletion, able to view member messages, among other functionalities.

Asset Inventory Management System
A full-stack web app built with React and Ruby on Rails, that management different organization inventory. Different users perform different roles depending on their authorization levels in managing the assets.

My portfolio website

My personal website with details about me, my services and work projects as a full-stack software developer.
